TERRACHANGE TOKEN WHITE PAPER

INTRODUCTION

There was a time when people cared about protecting the environment, regardless of their political beliefs. A time when people cared more about doing what is right and possible than fighting for meaningless and unattainable causes. With the advance of progressivism, the movement ended up hijacking the true meaning of environmental preservation and throwing this aspect that is so important for our existence and for our planet into the hands of leaders who only want to use this agenda to achieve their own personal goals.

It was from the revolt generated by this fact that the TerraChange (CHG) token emerged. We were born from the idea that yes; We must really preserve nature. But we will do it by example, by practice, by leadership. Not through narratives, imposition of ideas and militancy in favor of impossible goals. We will not attack abstract enemies that we can never defeat.

Our project goes against the grain of ESG and Woke ideologies that may soon end up suffocating small businesses with so many rules and regulations that will make it more expensive and unfeasible for small entrepreneurs to do business. We believe in a fairer, more transparent, and decentralized market. A market where individuals, small and large companies can defend the environment without strangling development, the economy and individual freedom.

We know that there are already a few other tokens that have an affinity for this sustainability purpose. But we are different precisely because we are against this whole movement that has misrepresented the true meaning of "environmental preservation". Let's innovate the market by seeking to protect our planet the old-fashioned way. And doing it with our bare hands. We will strive to ensure that our work and resources are not directed to partners and projects that follow ideologies that diverge from our own beliefs.

MORE ACTION, LESS INK AND POSTERS

In a world where environmental preservation often gets lost in the halls of activism, it's crucial that we rethink our approaches to saving the planet. The challenge is not to protest with colorful posters, but to adopt practical attitudes that really impact the environment in a positive, realistic and objective way.

Over the years, environmental preservation has been misrepresented in a media spectacle, where being eco-friendly has become more of a trend than a necessity. While some people dedicate themselves to raising flags and proclaiming impassioned speeches, garbage continues to pile up in the oceans, forests are decimated, and air pollution reaches alarming levels.

Many have become hostages of stage activism, forgetting that true environmental preservation lies in everyday actions. It's not enough to post on social media about the importance of saving bees; We need to plant flowers that feed them in our own backyards. It is not enough to protest deforestation; It is essential to support sustainable practices and responsible consumption.

It's time to abandon the idea that environmental preservation is a cause to be embraced only at grandiose events. You don't have to participate in protests to be effective. Small, everyday actions have a significant impact when it comes to preserving nature.

Cycling more often, recycling, saving water and supporting local products are concrete steps that everyone can take without the need for a megaphone. The focus should be on practical changes, not ephemeral hashtags or slogans.

In addition, it is essential to understand that environmental preservation is not a political agenda, but a collective responsibility. It's not about being left-wing or right-wing, progressive or conservative. We all share the same planet and therefore the same responsibility to care for it.

Instead of getting lost in endless debates about who is more environmentally conscious, let's focus our efforts on tangible actions. Environmental preservation doesn't need heroes with capes and grandiose speeches; It needs ordinary citizens who are committed to making sustainable choices in their daily lives.

So, the next time you feel like attending a demonstration, consider planting a tree instead of carrying a sign. Real change occurs when each of us takes responsibility for our actions and decides to be part of the solution, not part of the show. The TerraChange community doesn't have time for cheap activism. We're busy doing what's necessary.

WHERE TO START?

Our team is based in Brazil, where we started the preservation projects. But we won't just limit ourselves to our country. TerraChange will be a global movement, involving various teams, collaborators and volunteers around the world. We count on you, who are reading this document right now, to also participate in this movement of change.

Keeping in mind the discourse so far, we will further explain how our token intends to help solve the environmental problem in a practical way. We will list some priorities, but it is important to clarify that they serve only as a guide and we will always be open to innovative ideas that, in some way, are related to our cause. Here's the list:

- Depollution and cleaning of springs, rivers and sea. Water is a fundamental part of the quality of life of all living terrestrial forms.
- Reforestation using native and/or fruit species of the region. By restoring key areas, we promote the return and permanence of species that were previously absent or threatened.
- Cleaning of dirty areas due to incorrect garbage disposal. Incorrect waste disposal can lead to various problems and forms of soil and groundwater contamination.
- Recycling of various materials so that they can continue to have usability without harming nature.
- Support for the preservation of wild and marine fauna. We can't stop species from going extinct, it's been going on for as long as life has existed on Earth, long before we were here. But we can do our best to at least prevent species from going extinct by our direct actions. We can also assist in the recovery of endangered species.
- Our goal is to help social causes, because we are also animals and part of the environment, right? Supporting other humans is just as important as supporting animals.
- Promotion and encouragement of ecotourism, outdoor sports and similar initiatives, which promote the reconnection and integration of people with the environment. We believe that, through this, it is possible for people to glimpse the importance of protecting this precious heritage.
- Investment and incentives in renewable energy projects.

And how do we plan to execute these actions? That is the question you, dear reader, could be asking yourself right now. As our community is decentralized and brings together people from all over the world, we can all carry out our own actions with a local group, on a voluntary basis, at any time and document the actions within our communication channels.

In addition, our token is in the BNB Smart Chain (BSC) environment. When it is traded or transferred, small buying and selling fees are charged. These fees will fund the token's existence, as well as services and workforce to execute these action plans listed above. We'll go into more detail about this technical part in the next chapter.

In short, the trading fees, along with the community's own workforce, will serve as support for carrying out our actions.

TOKENOMICS

Now let's dive into the numbers and functionality part. Here, you'll get a better understanding of how our token is positioned on the network, its numbers, the concept of how it works, as well as breakdowns on the team's wallets and project fees.

Technical Data

Name: TerraChange (CHG)

Network: BEP-20 Token (BNB Smart Chain)

Decimals: 9

Contract Address: [0xD448Cb1FdaB540302721434849b3ee22E38304E4](#)

Max Supply: 10.000.000 (10M)

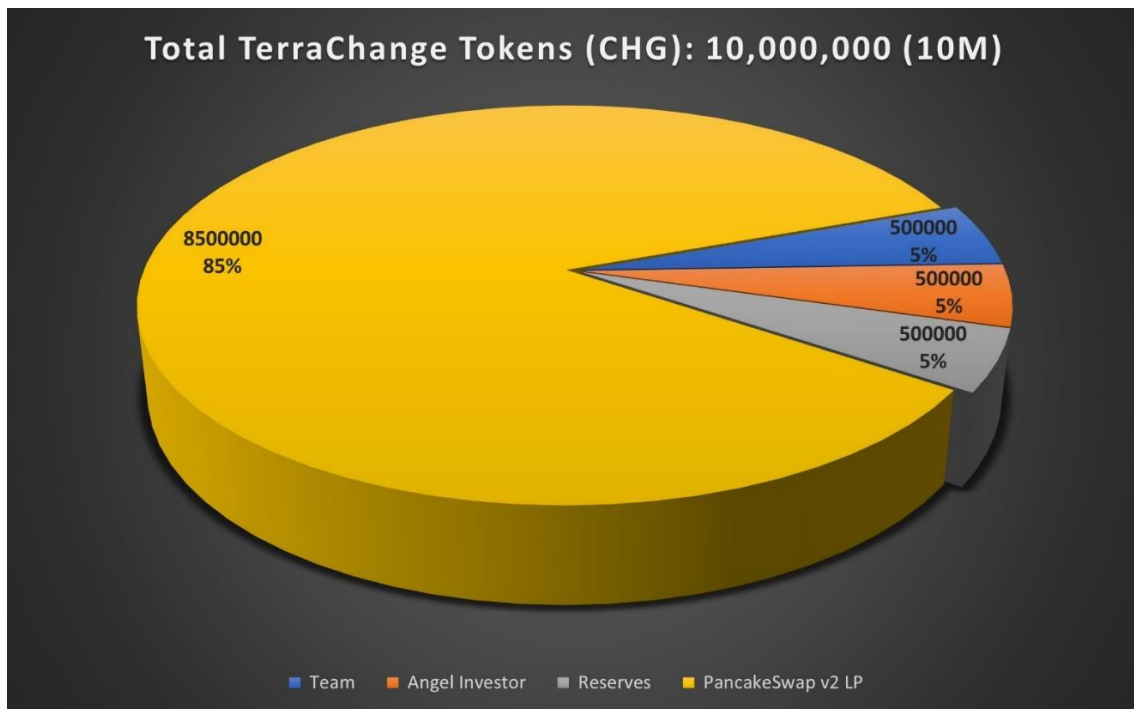

Circulating Supply: 10.000.000 (10M)

Liquidity Pool Lock: [UNCX Locker](#) (10 years)

This token is a relaunch with enhanced security and functionality. The original was created under [this](#) address. To relaunch, we asked everyone who wanted to migrate to send their CHG balance to [this](#) wallet, which was created just for this purpose. Those who chose not to migrate were told to sell their tokens. After that, we sold the entire balance so that we could withdraw some of the locked liquidity and add it to the new token pair. After the implementation of the new contract, we send the balances to all wallets that chose to migrate to the new contract.

Team Wallets

In the first (old) contract, the tokens were divided from the initial amount created, and of the total ten million tokens, five percent went to the team. Five percent to the investor who provided the liquidity (capital) needed to start the project. We also set aside 5% for future listings and partnerships in the "Reserves" portfolio. The remaining 85% has been added in its entirety to PancakeSwap's v2 liquidity pool. The initial distribution can be seen in the following chart:

The team's wallets are divided among the following addresses:

Team: [0x335AE368ac257cD42cB31Bd2946F6Ba77a335F6d](https://www.bloxroute.com/txpool/txpool?txid=0x335AE368ac257cD42cB31Bd2946F6Ba77a335F6d) (CHG reservations)
[0x5FD695B51A87B8F98ec52FbaBD1316B195477Dc4](https://www.bloxroute.com/txpool/txpool?txid=0x5FD695B51A87B8F98ec52FbaBD1316B195477Dc4) (fees)

They are team wallets. In addition, the first wallet is the owner of the first (old) contract and the second is the deployer of the (new) relaunch contract. The funds accumulated here belong to the team, rewarding the diligent members behind \$CHG, ensuring that we continue to attract and retain top talent. But we can also decide to use it as a support for marketing, development, partnerships, listings, project execution, and other strategic points to maintain or improve the token's ecosystem. The team reserves the right to decide how to make use of the balances of both wallets at its own discretion without commitments or obligations. Remembering that to support the token, there are already the "Reserves", "Projects" and "Marketing" wallets.

Angel Investor: [0x2248e41363c0769922be5aE9AE01460ed1c79b95](https://www.bloxroute.com/txpool/txpool?txid=0x2248e41363c0769922be5aE9AE01460ed1c79b95)

Personal reserve of the investor who provided the initial liquidity (capital) for the project.

Reservations: [0x84516a04F0F416D4f2EE87876dA97cfff5C98fd](https://www.bloxroute.com/txpool/txpool?txid=0x84516a04F0F416D4f2EE87876dA97cfff5C98fd)

This wallet is managed by the developer, but the funds are reserved exclusively for marketing, development, partnerships, listings, and other strategic points to maintain or enhance the token's ecosystem, except for project execution.

Projects: [0xF790efa0839714c2d36d58B6900265641EE6851a](https://www.terrachange.com/0xF790efa0839714c2d36d58B6900265641EE6851a)

Wallet where fees are directed to support projects backed by the TerraChange Token. This wallet also accepts donations of other tokens, in case our community wants to contribute directly to the execution of projects.

Marketing: [0x4b6Fc77c01E138E8eEb2ceA6Ee7382c0Cca6382e](https://www.terrachange.com/0x4b6Fc77c01E138E8eEb2ceA6Ee7382c0Cca6382e)

Fees to this portfolio are designed to increase the holder base, foster partnerships, and maintain a dominant presence in the industry.

How the token works

Transactions involving TerraChange Token (CHG) have small fees charged during buying, selling, and transferring. These fees will fund the projects to be executed by the team, as well as serve to encourage retention.

Fees apply for buying and selling, as well as transfers, as follows:

- **Buy/Sell: 5% Total**

Marketing Fee: 1% to increase the holders base, promote partnerships and maintain a dominant presence in the industry.

Auto liquidity: 1% goes into auto liquidity, improving long-term security and stability.

Projects: 1% goes to the sponsorship of our projects related to environmental preservation.

Dividends: 1% turns into dividends that are paid daily in BNB directly into the wallets of all holders with 10 thousand CHG or more.

Team: 1% rewards the team that works hard behind the \$CHG, ensuring that we continue to attract and retain top talent.

Transfers: 2% Total

Projects Fee: 1% goes to the sponsorship of our projects related to environmental preservation.

Dividends: 1% turns into dividends that are paid daily in BNB directly into the wallets of all holders with 10 thousand CHG or more.

Dividends are paid daily if there is sufficient trading volume on the day. In addition, they are always paid in BNB. They go directly to the wallets of holders who hold at least 10,000 (10k) CHG tokens.

Incentives

In addition to really supporting and collaborating with the environmental cause by trading and promoting our token, you also have the possibility to enjoy other advantages. We already have some ideas for new ways to reward our community. But for these ideas to become a reality, we first need to increase the token's adoption. During the next phases of the project, we will come up with ideas and evaluate community feedback and suggestions on this topic.

ROADMAP

To check out our strategic roadmap in detail, [CLICK HERE](#).

This roadmap serves as a strategic guide for the growth and evolution of the TerraChange community. As with any dynamic project, aspects can be adapted based on changes in the industry, community feedback, and unforeseen opportunities or challenges. However, at its core, it represents our commitment to continued growth, community engagement, and excellence.

RISKS AND CHALLENGES

Investing in crypto assets can be an exciting opportunity, but it also comes with significant risks and challenges, especially for those who are new to the subject. Here are important points to consider:

Volatility: Crypto asset prices can be extremely volatile. This means that the value of your investment can increase or decrease dramatically in a short period, which can be risky if you need the money invested quickly.

Complexity: The crypto market is complex and can be difficult to understand. There are many diverse types of crypto assets, each with its own set of rules and underlying technologies.

Safety: Security is a major concern. Hackers often target crypto assets, and since transactions are often irreversible, if someone steals your assets, it may be impossible to recover them.

Regulation: The regulatory environment for crypto assets is still developing. Changes in laws and regulations can affect the value of crypto assets, the way they are traded, and the ability to use them for everyday transactions.

Research: It is essential to do your own research before investing. This includes understanding the crypto asset you're considering investing in, as well as the broader market.

We will not refund you due to any issues or loss of funds for your trading with the TerraChange Token (CHG). Especially, but not limited to:

- Theft of your tokens due to a vulnerability in your device.
- Loss of your private key, which should always remain in your possession and not be shared with third parties, as it provides unrestricted access to your balance. Without the private key, your balance will be inaccessible forever.
- If you are the victim of a scam organized by people who have tricked you by asking you to send your balance to an address or make you share your personal details or private key.
- Due to the high volatility of the crypto market, which can cause large swings in a short period.

Investing is your personal decision, and you take on all the risks as you go. Remember, never invest more than you can afford to lose, and consider seeking professional financial advice if you are unsure about any investment. All data presented so far is for informational purposes only and does not serve as a trading recommendation.

CONCLUSION

In short, the potential of a crypto asset that supports environmental preservation projects is immense. Not only does it offer a new way to fund initiatives that are important to the planet, but it also engages the global community on environmental issues in an innovative and decentralized way. The idea of linking financial investments to concrete sustainability actions is an attractive proposition that can generate a significant positive impact.

However, like any investment, there are risks associated with it. The volatility of the cryptocurrency market is notorious, and investors should be aware that the value of the crypto asset can fluctuate dramatically. Additionally, the risk of scams is a valid concern that requires great diligence and careful research before any investment.

The key to the success of this crypto asset will be the transparency and verification of the supported projects, ensuring that the investments are truly contributing to environmental preservation. If these challenges can be overcome, the future of TerraChange Token will be bright and influential on the global stage.
